[JellyBox HowTo: 22 Back Cover](#)

In this video, we add the back acrylic piece.

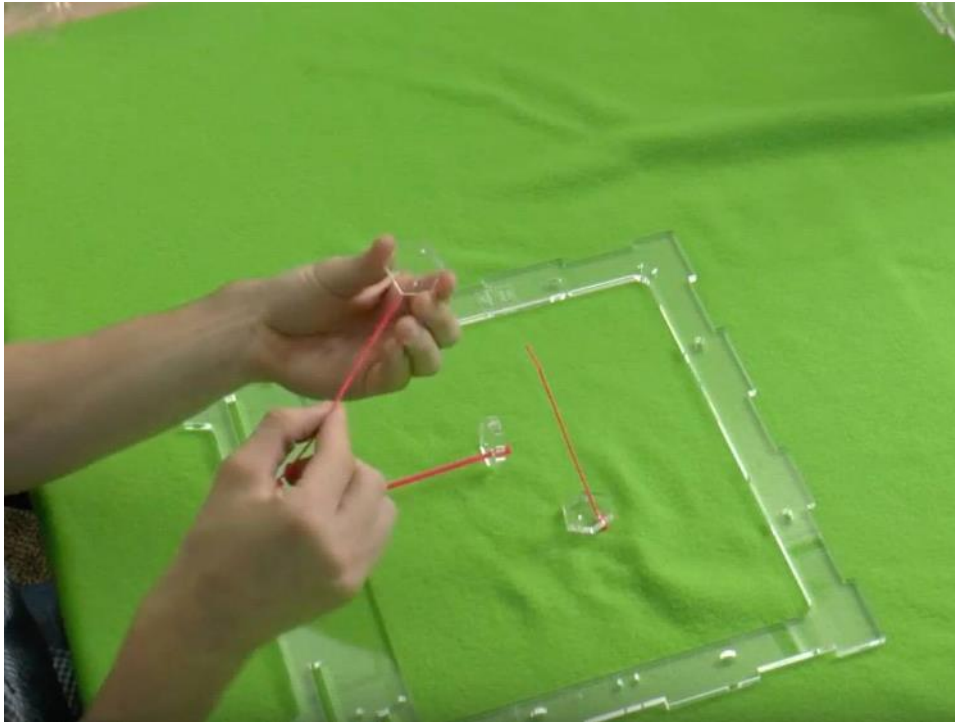

You'll Need:

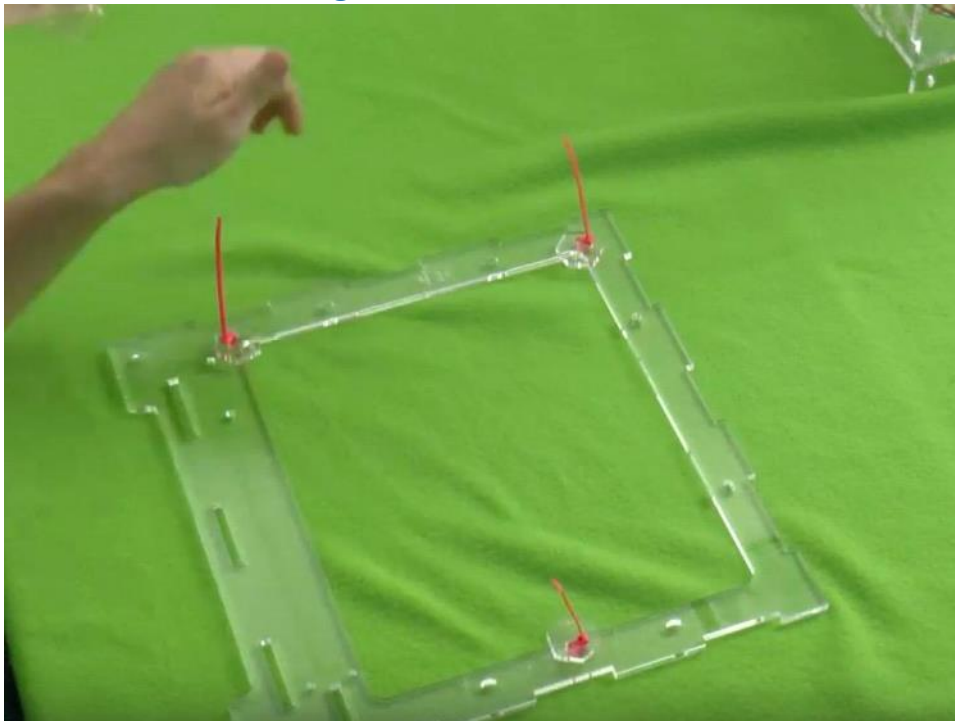

- Back acrylic piece
- Hexagonal acrylic mounts (3)
- 6" zip ties (9)
- Corner clips (6)

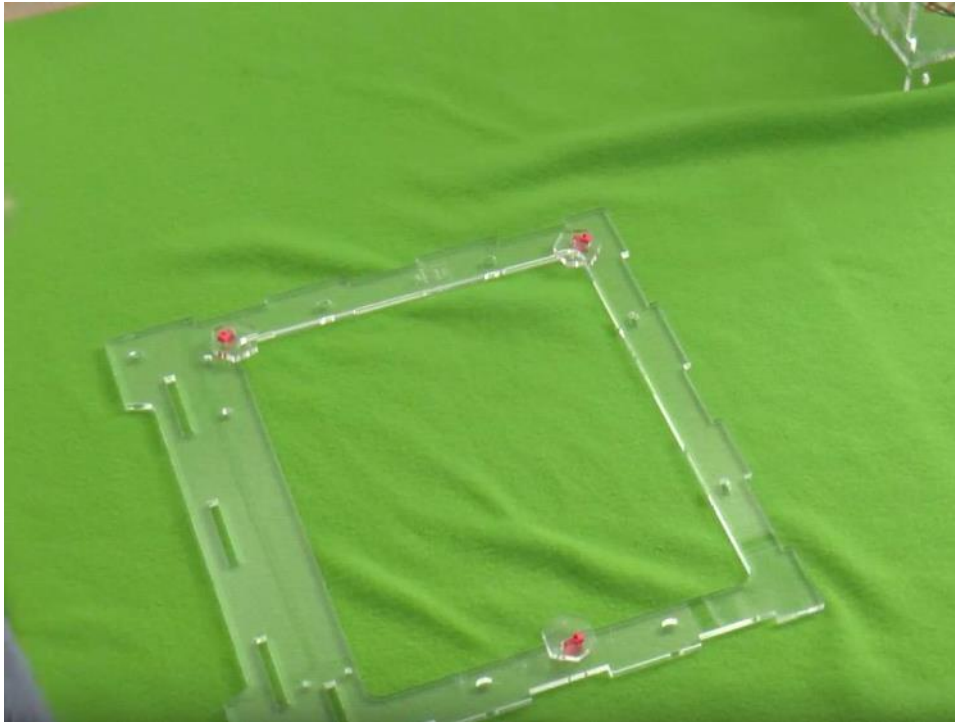

Title: Prepare the Hexagonal Mounts

Thread a 6" zip tie through each hexagonal mount.
(The toothy part of the zip tie should be facing the center point of the hexagonal piece.)

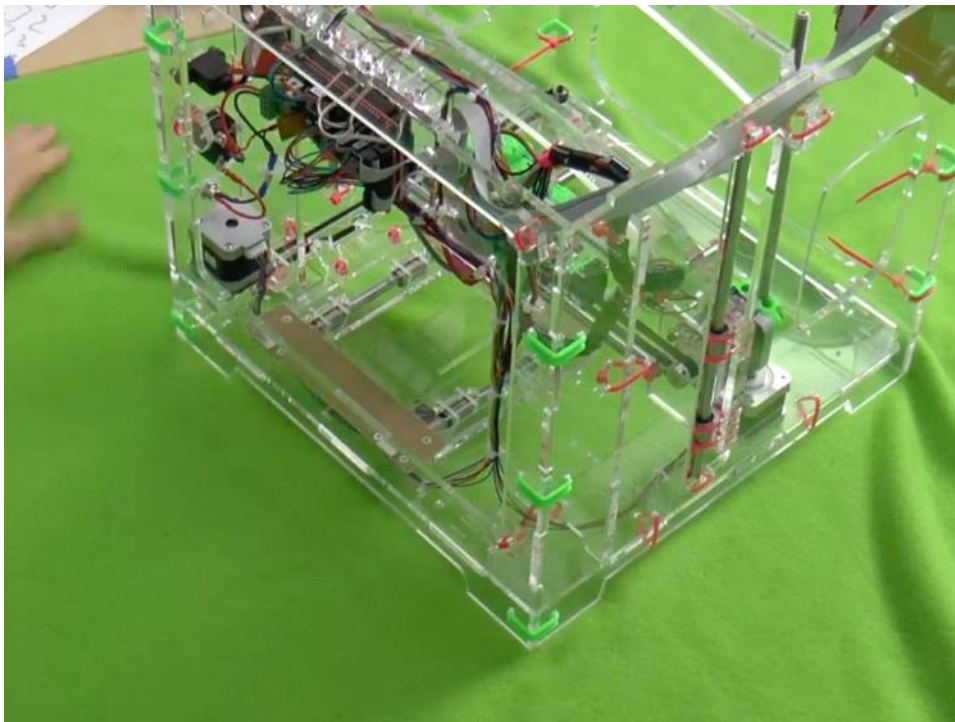

Title: Attach the Hexagonal Mounts

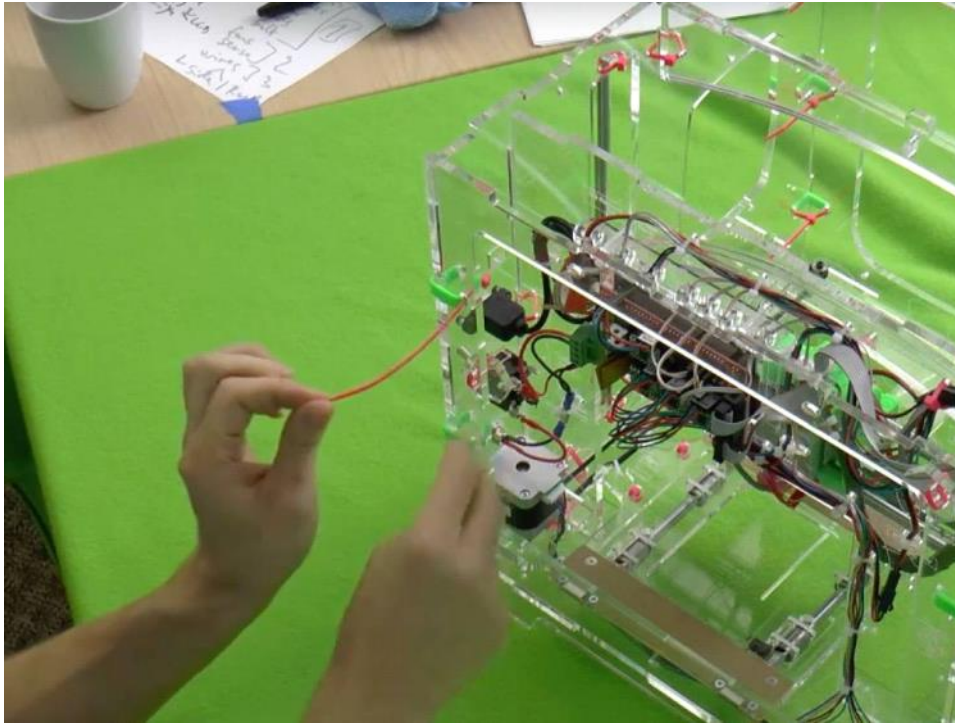

The etchings on the back piece should be on the side facing you; that is, the text should look mirrored.
Attach the hexagonal mounts on top of the back with the zip ties.
Two mounts go on the left: at the top and bottom.
One mount goes at the right.

Title: Connect the Back Panel

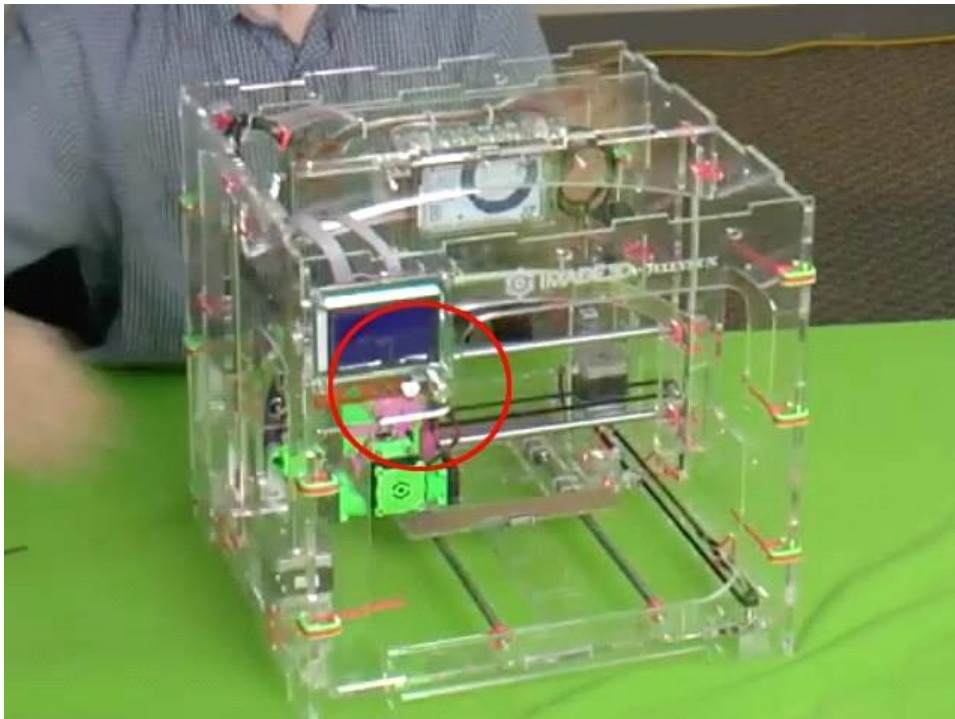

Use the six corner clips to attach the back panel to the box.

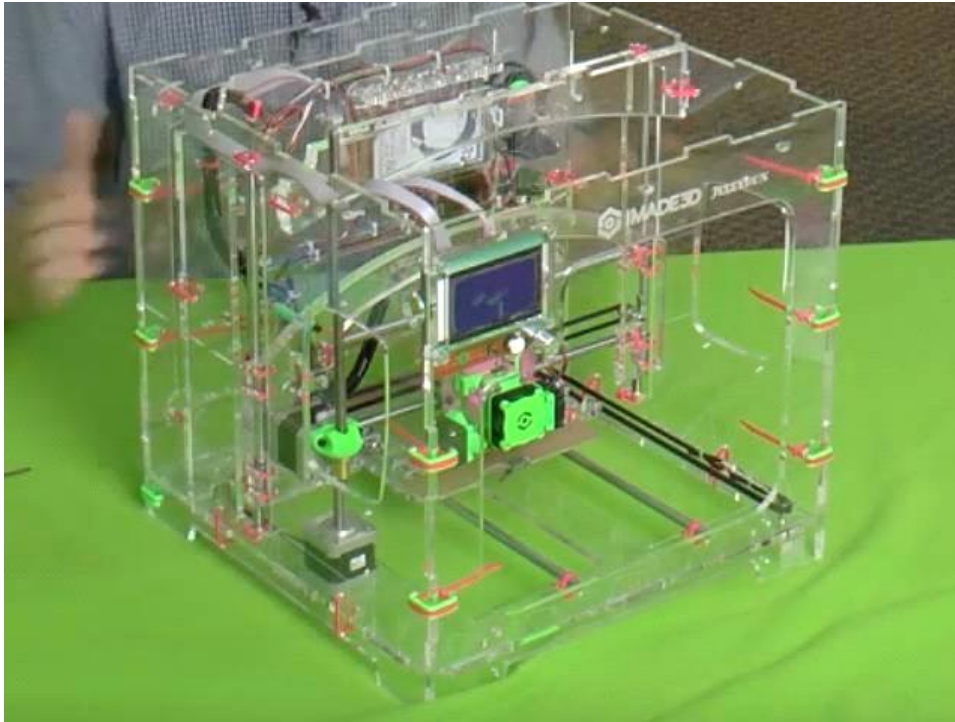

Title: Secure the Panel

Use the last six 6" zip ties to fix the back in place.
Tip: Thread the ties towards you first will make it easier to tighten them.

Title: Beware of the Knob

Be careful of this knob when rotating the printer on its front for easier access. If it gets pushed in, it won't turn properly; to remedy this simply pull it out again with vise grip.
