

USB Printing ?

Saturday, November 12, 2016 9:38 PM

Yes, you can print via USB directly from your computer using Printron, Cura, Repetier Host...
However, you shouldn't!

USB is the Achilles Heel of any CNC Application

- Computer goes to sleep - print aborted
- You trip over the USB cable - print aborted
- The USB connection temporarily disconnects - print aborted
- Finicky USB drivers - print aborted
- Etc.etc

Therefore, **always print from an SD card**, or over wifi.

(Unless you're sending in gcodes on the fly as a part of some testing or calibrating)
